Project Description

BlogEngine.NET may be the simplest and most light weight ASP.NET blog at the moment, but still full featured. Here are some of the features:

- Multi-author support
- Pingbacks and trackbacks
- Event based for plug-in writers
- Theming directly in master pages and user controls
- Gravatar and coComments implemented
- Live preview on commenting
- Comment moderation
- BlogML import/export
- Extension model
- Code syntax highlighting
- Mono support
- Full editing and creation of pages that are not posts
- Extended search capabilities
- Tag cloud
- Self updating blogroll
- Runs entirely on XML or SQL Server. Your choice.

Where and why

BlogEngine.NET is being used in a wide variety of Blog and general websites

- <http://www.bryanavery.co.uk/>
- <http://www.guysmithferrier.com/>
- <http://www.mad-tri.com/>
- <http://www.bromham.org.uk/>

User Interface

- Data
- Editors - TinyMCE
- Themes
- User Controls
- Widgets
- Admin
- Extensions

Core

Business Models

DataStore

Providers (XML, SQL, MySQL...)

Syndication (RSS, Atom)

Web (Controls, HttpHandlers, HttpModules...)
