

# Studio Styles

- Visual Studio can take on any colouring you like and is defined by keyword type
- Changing your text window background from white to black can reduce eye strain
- For
  - Scheme creator
  - Gallery
  - And more...
- Visit <http://studiostyles.info/>

# System.Lazy

- New in .NET 4.0
- Has a generic type – `System.Lazy<T>`
- Allows you to execute code on demand
- You can interrogate the type to find out if it has been executed before you call the code to execute.
- Good for lazy loading data
- More information search for `System.Lazy`

*deliver more than expected*

From the leading set of .NET developer tools to testing, Web CMS and agile project management solutions, Telerik offers a solid foundation to step on. And as a product is only as good as the support service that comes with it we don't make compromises with any of the two.
